

ARAVIND T

AI Engineering | Agentic RAG | LangChain / LangGraph | Multi-Agent Systems | Applied ML

+91-93539-30639 aravindt2425@gmail.com [linkedin.com/in/aravindbarfa20](https://www.linkedin.com/in/aravindbarfa20) github.com/AravindBarfa20 Bengaluru, India

SUMMARY

AI undergraduate who ships production-shaped agentic systems under hackathon deadlines, not just notebooks. Built an autonomous SRE remediation agent, a temporal-memory video AI engine, and an LLM-driven cultural adaptation system across four hackathons in six months. Published first-author research on ML-based predictive modelling. Strong in agent orchestration (LangChain/LangGraph, Agentic RAG) with the backend and deployment skills (FastAPI, Docker) to take agents from prototype to running system.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C

AI & Agents: LangChain, LangGraph, Agentic RAG, Hugging Face Transformers, Vector Search (FAISS, ChromaDB)

ML Frameworks: TensorFlow, PyTorch, Keras, Scikit-learn

Backend & APIs: FastAPI, Node.js, REST APIs, GraphQL, WebSockets, JWT/OAuth 2.0

Databases: PostgreSQL, MongoDB, Redis, ChromaDB, FAISS

Cloud & DevOps: Docker, GitHub Actions, Vercel, Hugging Face Spaces | Exploring: AWS (EC2, S3, Lambda), Kubernetes, Terraform, Prometheus/Grafana

Tools: Git, Jupyter Notebook, Google Colab

KEY PROJECTS

SRE-Bot – Autonomous Incident Remediation | Python, TypeScript, FastAPI, Docker

Apr 2026

- Built a production-grade autonomous SRE benchmark for the **Meta x Scaler OpenEnv Hackathon**; engineered a Cascading Ghost fault injector to stress-test LLM signal-vs-noise reasoning under adversarial pressure.
- Architected a containerized simulation engine with fractional scoring that penalizes destructive guessing and rewards systematic log triage.
- Deployed a real-time control plane on Vercel with the execution engine on Hugging Face Spaces, mirroring a production split-service architecture.

ARGUS – Temporal Memory Engine | Python, Computer Vision, AI

Feb 2026

- Solved context amnesia in video AI by designing a temporal memory system enabling cross-frame reasoning without reprocessing full video.
- Reduced query response latency by retrieving from compressed memory instead of re-analyzing raw frames on every query.

ContraCulture – AI Cultural Adaptation Engine | TypeScript, Next.js, LLM

Mar 2026

- Built for the **Lingo.dev Hackathon**; rewrites landing-page copy for global markets using Hofstede's cultural psychology framework.
- Generated a predicted conversion-lift estimate per locale to guide localization prioritization for go-to-market teams.

RESEARCH PUBLICATION

A Predictive Framework for Dust Accumulation and Efficiency Loss in Solar-PV Systems

Aravind T, Avinash Dubey, Aryan, Chirayu N Hudhar — IJIRT, Vol. 12 Issue 6, Nov 2025

- Built an LSTM-based model to forecast dust accumulation on solar panels and estimate power-efficiency loss from environmental sensor data.

HACKATHONS & COMPETITIONS

- Meta x Scaler OpenEnv Hackathon – SRE-Bot (Apr 2026)
- Lingo.dev Hackathon – ContraCulture: AI Cultural Adaptation Engine (Mar 2026)
- Composio x DevClub IITD x Chirality Labs – Agents in Production Hackathon (Nov 2025)
- EY Techathon 6.0 – Executive Summary Round (Apr 2026)
- Jaipur Cybrathon 2025 (Jan 2026)

EDUCATION

Bachelor of Engineering, Atria Institute of Technology, Bengaluru

2023 – 2027

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate • Oracle eCloud Certification • GitHub Foundations (Microsoft Press Prep)

LANGUAGES

English, Hindi, Telugu, Kannada, Marwari
